

TORIC TRIFOCAL IOL Premium Surgery / Premium Complication

Dr. Alfonso Arias Puente, MD, PhD, FEBOPhtth

NO FINANTIAL INTEREST

TORIC TRIFOCAL IOL

Clinical case

- 59 years old, professional driver, uncomfortable vision with glasses
- R.E.: +4.00 sph – 4,50 cyl 5° BCVA: 0,6
- L.E.: +2,75 sph – 1,75 cyl 40° BCVA: 0,7
- PRESBYOPIA
- Endothelial count: OD: 2.850 cell / mm² OI: 2.753 cell/ mm²
- OCT: healthy macula

SURGICAL OPTION
TORIC TRIFOCAL IOL
AT-LISA TRI TORIC

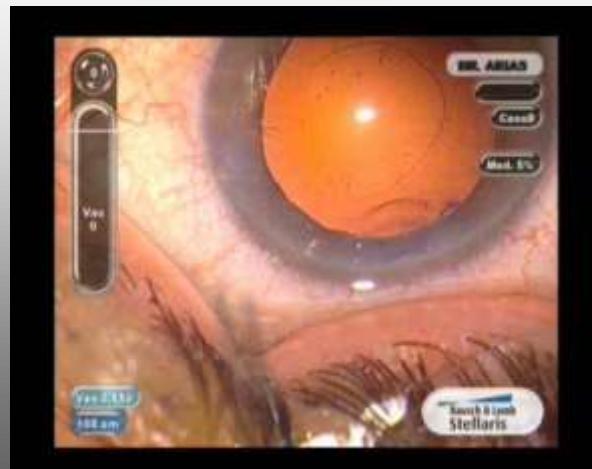

Ophthalmologist: "It's a good case for lens refractive surgery"

Patient: "I have been successful with the election "

TORIC TRIFOCAL IOL

Surgery RE (conventional phaco technique)

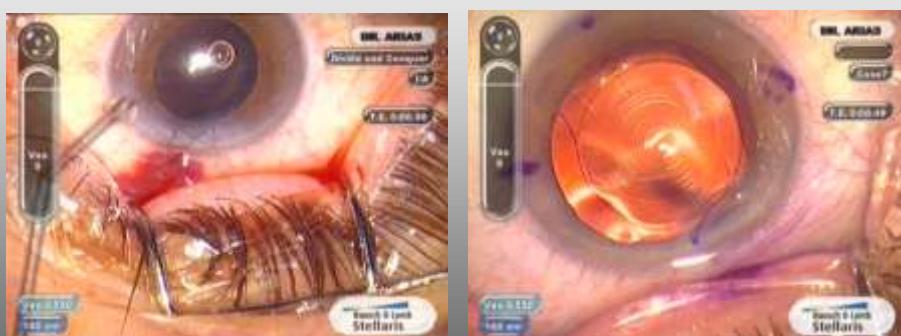

TORIC TRIFOCAL IOL

Surgical result

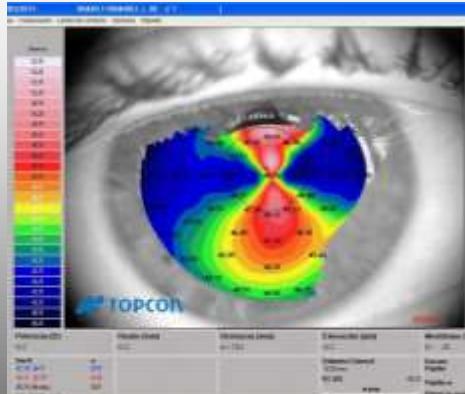

RE (aphakia)

LE (7 days later) Multifocal Toric IOL

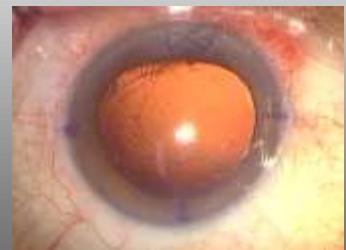

TORIC TRIFOCAL IOL

Postop follow-up RE

Sim-K	e
42,18 @ 5°	0,57
49,31 @ 95°	0,46
45,74 (Media)	0,51
CYL -7,13 D ax 5°	

Refractive status: +13,00 sph - 6,50 cyl 0° BCVA : 0,4

TORIC TRIFOCAL IOL

Postop follow-up RE

Refractive status: +13,00 sph - 6,50 cyl 0°
BCVA : 0,4

GRADE OF SATISFACTION: DISSATISFIED ?

TORIC TRIFOCAL IOL

Postop follow-up RE

The slide displays a composite image. On the left is a corneal topography map showing a central gray area representing the lens and colored concentric rings around it. To the right of the map is a table of refractive parameters:

Sim-K	e
42,18 @ 5°	0,57
49,31 @ 95°	0,46
45,74 (Media)	0,51
CYL -7,13 D ax 5°	

In the center, a white box contains the text "SURGICAL OPTIONS?" followed by a bulleted list:

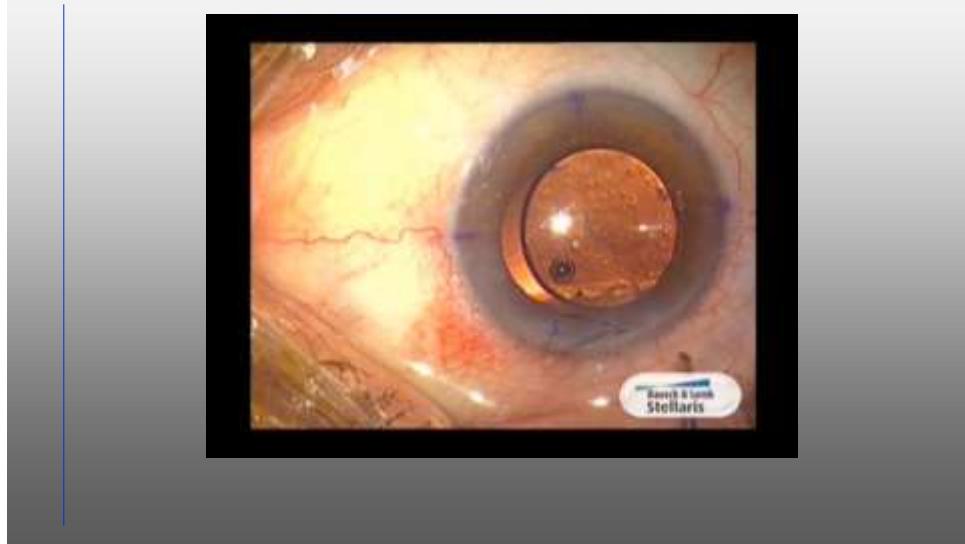

- There is not multifocal toric IOL for sulcus
- Multifocal IOL + Excimer laser
- Multifocal IOL + Relaxing corneal incisions

On the right side of the image is a close-up photograph of an eye during surgery, showing the lens being implanted.

Refractive status: +13,00 sph - 6,50 cyl 0° BCVA : 0,4

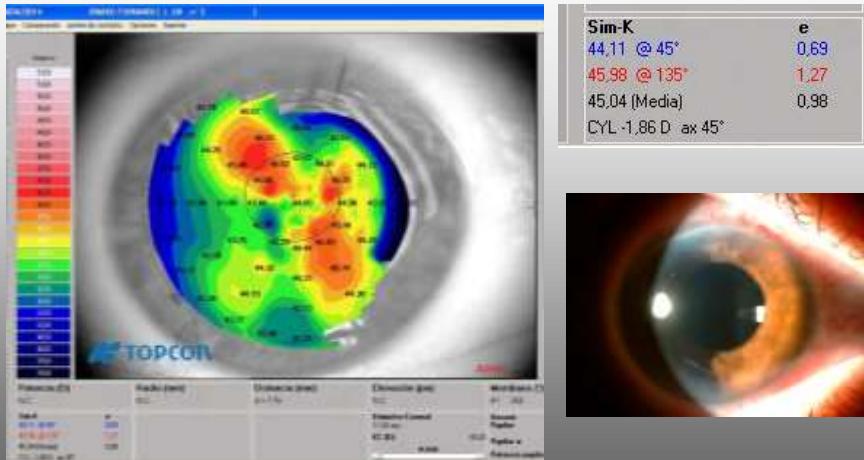

TORIC TRIFOCAL IOL

Implant multifocal aspheric IOL (sulcus)

TORIC TRIFOCAL IOL

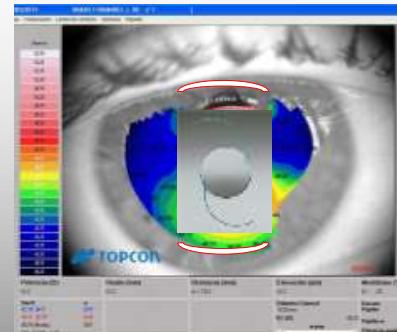

Second postop follow-up RE

REFRACTION: -0.50 sph - 1,50 cyl 20° BCVA : 0,8

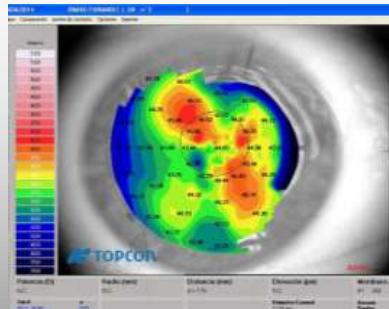

TORIC TRIFOCAL IOL

First postop follow-up RE

Sim-K	e
42.18 @ 5°	0.57
49.31 @ 95°	0.46
45.74 (Media)	0.51
CYL -7.13 D ax 5°	

Second postop follow-up RE

Sim-K	e
44.11 @ 45°	0.69
45.98 @ 135°	1.27
45.04 (Media)	0.98
CYL -1.86 D ax 45°	

+13,00 sph - 6,50 cyl 0° BCVA : 0,4

-0.50 sph - 1,50 cyl 20° BCVA : 0,8

TORIC TRIFOCAL IOL

Final surgical option: BIOPTICS with excimer laser

The screenshot shows a corneal topography map with a color scale from blue (low) to red (high). Below the map, a table provides refractive parameters:

Sim-K	e
44,11 @ 45°	0,69
45,98 @ 135°	1,27
45,04 [Media]	0,98
CYL -1,86 D ax 45°	

Below the table, the text reads: -0,50 sph - 1,50 cyl 20° BCVA : 0,8

Reject the option !!!

PREMIUM REFRACTIVE SURGERY

What have we learned with that case?

NEEDS not only:

- Premium Patient selection
- Premium IOL selection
- Premium surgical technique

NEEDS also:

- Premium surgeon
- Saving surgical solutions in case of complication
- Be sure that patient knows the **real possibility** of “premium” surgical complications even with premium surgery

شكرا جزيلا

¡ Muchas Gracias !
